Date: July 26, 1994
Subject: RI/FS QAPP Addendum
Lenz Oil Site
Lemont, Illinois

The soil samples that will be collected as part of the nonaqueous phase liquid (NAPL) evaluation at the Lenz Oil Site will be sent to the QUANTERRA Laboratory located in Santa Ana, California for analysis of the contract laboratory program (CLP) target compound list (TCL) volatile organic compounds, TCL semivolatile organic compounds, TCL pesticides/polychlorinated biphenyl compounds, and target analyte list metals and cyanide.

The January 1992 version of the QAPP Addendum had ARDL and Skinner & Sherman doing the organics and inorganics analyses, respectively, in soil samples. This change is necessary because of contractual problems with ARDL and to simplify the sample shipping procedures. Because the aforementioned analyses will be performed by following standard CLP procedures and in accordance with the policy of the U.S. Environmental Protection Agency, Region V, Quality Assurance Section, there is no need to submit new Standard Operating Procedures for review. A revised Page 2-3 of the January 1992 QAPP Addendum is included.

If you have any questions or comments, please do not hesitate to call me.
